## Executive Summary

The "Social and Behaviour Change through Community Engagement and Human Centred Design (HCD) Program" implemented by LIFE Nepal in Madhesh Province, Nepal, aimed to address multifaceted challenges including poverty, malnutrition, limited access to quality education, and inadequate child protection mechanisms. With technical and financial support from UNICEF Nepal, the program targeted 64 communities across eight districts, employing a holistic approach centered on community engagement and human-centered design principles.

The program's objectives were to evaluate its impact on social behavior change, health, WASH, nutrition, education, child protection, and social protection. A quantitative pre- and post-design methodology was employed, collecting baseline and endline data between March 15 to April 15, 2023, and December 15, 2023, to January 15, 2024, respectively. Trained volunteers conducted door-to-door home visits, collecting data on key indicators using a standardized checklist.

Findings revealed progress in various areas, including a reduction in out-of-school individuals, improvements in vaccination coverage, nutrition status, and access to WASH facilities. However, challenges persist, such as poverty, child labor, lack of parental awareness, and gender disparities in child protection.

Recommendations include enhancing community engagement, developing tailored educational interventions, improving healthcare access, expanding nutrition promotion programs, investing in WASH infrastructure, strengthening child protection mechanisms, expanding social protection initiatives, providing capacity building and training, implementing robust monitoring and evaluation systems, and fostering sustainability and scale-up of successful interventions.

By implementing these recommendations, stakeholders can work collaboratively to address complex challenges and promote positive social and behavior change for sustainable development and improved well-being in Madhesh Province, Nepal, and similar contexts.

## Introduction

LIFE Nepal had implemented the "Social and Behaviour Change through Community Engagement and Human Centred Design (HCD)" program in 64 communities of 32 Palikas across eight districts - Saptari, Siraha, Dhanusha, Mahottari, Sarlahi, Rautahat, Bara, and Parsa in Madhesh Province, Nepal, with technical and financial assistance from UNICEF Nepal. Through targeted interventions in those areas such as Social Behaviour, Nutrition, Education, Child Protection, and Social Protection, the program aimed at promoting positive social behavior changes and fostering sustainable development outcomes to address multifaceted challenges ranging from poverty and malnutrition to limited access to quality education and inadequate child protection mechanisms. The program adopted a holistic approach, leveraging community engagement and human-centered design principles to empower local populations and address underlying systemic issues. Finally, the program was able to bring tangible improvements in the lives of community members, particularly vulnerable groups. Therefore, this comparative analysis was conducted to observe the changes in the life situations of the people, based on information collected from March 15 to April 15, 2023, as baseline, and from December 15, 2023, to January 15, 2024, as the end line from 64 targeted communities.

## Objectives

The overall objective was to evaluate the impact and effectiveness of the "Social and Behaviour Change through Community Engagement and Human Centred Approach in Madhesh Province" program in addressing significant social and developmental issues, with a focus on Social Behaviour, Health, WASH, Nutrition, Education, Child Protection, and Social Protection. The specific objectives were:

- ☼ To assess the extent to which the program has influenced social behavior change within the targeted communities.
- ☼ To determine the program's impact on improving nutritional practices and outcomes among community members.
- ☼ To evaluate the program's contribution to enhancing educational opportunities and outcomes for children and adolescents within the intervention areas.
- ☼ To investigate the effectiveness of the program in strengthening child protection mechanisms and reducing vulnerabilities among children and adolescents.
- ☼ To examine the program's role in promoting social protection measures and enhancing the resilience of vulnerable populations in Madhesh Province.
- ☼ To identify key factors influencing the success or challenges encountered during the implementation of the program.
- ☼ To provide evidence-based recommendations for future interventions to improve social and behavior change initiatives, with a focus on community engagement and human-centered design approaches in Madhesh Province and similar contexts.

## Methods

This study employed a quantitative approach, specifically utilizing a pre- and post-design methodology to evaluate the effectiveness of the "Social and Behaviour Change through Community Engagement and Human Centred Design (HCD) Program" in Madhesh Province, Nepal. The methodology allowed for the measurement of changes in key indicators across priority areas including Social and Behaviour Change (SBC), Nutrition, Education, and Child Protection.

### *Sampling Strategy.*

A purposeful sampling strategy was implemented to target families experiencing poor, marginalized, and excluded conditions in Madhesh Province. Sixty-four communities were selected from 32 local governments across eight

districts: Saptari, Siraha, Dhanusha, Mahottari, Sarlahi, Rautahat, Bara, and Parsa. These communities were chosen based on specific criteria such as being underserved, marginalized, left behind, and having high density and low capacity.

### **Data Collection:**

Baseline information was collected between March 15 and April 15, 2023, and endline data was collected between December 15, 2023, and January 15, 2024. For that, trained volunteers and project personnel conducted door-to-door home visits using a standardized checklist developed cooperatively by LIFE Nepal, UNICEF Nepal, and local authorities. The checklist included questions and measures relevant to priority areas such as Social Behaviour, Nutrition, Education, Child Protection, and Social Protection. Before the data collection, volunteers were oriented.

### **Data Analysis:**

Descriptive statistics, including frequencies, percentages, and averages, were calculated for each key indicator across the six focal areas at baseline and endline. Advanced Excel and SPSS software were utilized for data analysis and visualization. Before that, the collected data was encoded in an excel sheet. In addition, data was verified, cleaned, and tabulated.

## **Result with Discussion**

### **1. Population**

<b>Population</b>	<b>n</b>	<b>%</b>
<i>Total</i>	15647	100
<i>Male</i>	8093	52
<i>Female</i>	7554	48
<i>Total &gt;18</i>	8706	100
<i>Male</i>	4499	52
<i>Female</i>	4207	48
<i>Total 5-18</i>	4673	100
<i>Male</i>	2413	52
<i>Female</i>	2260	48
<i>Total &lt;5</i>	2268	100
<i>Male</i>	1181	52
<i>Female</i>	1087	48

The population data provided delineates a comprehensive snapshot of demographic distribution across various age groups and genders. In this dataset of 15,647 individuals, males constitute 52% (n=8093) while females make up 48% (n=7554) of the total population, indicating a slight male majority. When segmented by age, most of the population, constituting 55.67% (n=8706), falls within the over 18 categories. The 5-18 age cohort represents 29.85% (n=4673) of the population, with a balanced gender distribution. For those under 5 years old, comprising 14.48% (n=2268) of the population (*for district, palika, and tole wise details please refer to annex 1*).

## 2. Education Status

<i>Education Status</i>	<b>Baseline</b>		<b>End line</b>	
	n	%	N	%
<i>Total OOS</i>	1302	100	659	100
<i>Boys</i>	638	49	322	49
<i>Girls</i>	664	51	337	51
<i>Total OOS &lt;10</i>	438	100	325	100
<i>Boys</i>	200	46	166	51
<i>Girls</i>	238	54	159	49

The provided data compares the educational status of individuals at baseline and endline, focusing on those classified as Out of School (OOS) and further segregating the data by gender and age groups. At baseline, out of a total of 1302 OOS individuals, boys accounted for 49% and girls for 51%. By the endline, the total number of OOS individuals decreased to 659, with the gender distribution remaining consistent at 49% boys and 51% girls. When considering OOS individuals under 10 years old, a total of 438 were identified at baseline and 325 at endline. Notably, there's a shift in gender distribution among this subgroup, with 54% girls and 46% boys at baseline, which equalizes to 51% boys and 49% girls at endline. This data indicates progress in addressing educational challenges, particularly in reducing the number of OOS individuals. However, boys and girls are still OOS. (For district, palika, and tole wise details please refer to annex 2).

<i>OOS reasons</i>	<b>N</b>	<b>%</b>
<i>Child labor</i>	124	10
<i>Child marriage</i>	52	4
<i>Discrimination</i>	77	6
<i>Distance school</i>	101	8
<i>Domestic and family tension</i>	32	2
<i>Engaged in household chores</i>	25	2
<i>Foreign migration for employment</i>	3	0
<i>Illiteracy</i>	156	12
<i>Lack of interest in study</i>	13	1
<i>Lack of parental awareness</i>	115	9
<i>Lack of quality of education in school</i>	44	3
<i>Lack of required documentation</i>	2	0
<i>Lack of stationeries to children</i>	25	2
<i>No Birth Registration</i>	10	1
<i>OOS friends</i>	176	14
<i>Poor</i>	295	23
<i>Poor home environment</i>	52	4
<i>Total</i>	1302	100

To know the reasons contributing to Out of School (OOS) status among individuals, with a total of 1302 cases analyzed. Among the identified reasons, poverty emerges as a significant factor, with 23% of cases attributing OOS status to financial constraints. Other notable factors include child labor (10%), lack of parental awareness (9%), and illiteracy (12%). Additionally, factors such as discrimination (6%), distance to school (8%), and domestic tensions (2%) also contribute to OOS status. Moreover, issues related to educational infrastructure and resources, such as lack of quality education (3%) and stationery supplies (2%), are identified as contributing factors. Social dynamics,

such as engagement with OOS friends (14%), and legal documentation issues, including birth registration (1%) and lack of required documentation (0%), also play a role. This comprehensive overview underscores the multifaceted nature of OOS status, highlighting the interplay between socio-economic, cultural, and educational factors like low literacy, poor learning outcomes, lack of educational opportunities, low level of people with higher education, lack of gender friendly learning opportunities, low level of employment after education, low literacy rate, low level of understanding regarding importance of education, still children are out of school or drop out. Addressing these diverse challenges requires targeted interventions aimed at mitigating barriers to education and fostering an inclusive learning environment for all children.

### 3. Health and Nutrition Status

<i>Health Status</i>	Baseline		End line	
	n	%	n	%
<i>Total &lt;5 not vaccinated</i>	998	100	320	100
<i>Boys</i>	533	53	151	47
<i>Girls</i>	465	47	169	53
<i>Total born in a health institution within 1 year</i>	350	100	462	100
<i>Boys</i>	196	56	238	52
<i>Girls</i>	154	44	224	48
<i>Total born at home within 1 year</i>	256	100	141	100
<i>Boys</i>	109	43	67	48
<i>Girls</i>	147	57	74	52
<i>Total children completed 6 months of full breastfeeding</i>	484	100	601	100
<i>Boys</i>	263	54	319	53
<i>Girls</i>	221	46	282	47

The baseline data indicates that out of 998 children under the age of 5 who have not been vaccinated, 53% are boys and 47% are girls. Of the total children born in a health institution within 1 year, 56% are boys and 44% are girls, while for those born at home within 1 year, 43% are boys and 57% are girls. Additionally, 54% of boys and 46% of girls have completed 6 months of full breastfeeding out of a total of 484 children. In the end line data, the proportion of children not vaccinated decreased to 32% with 47% being boys and 53% girls. For those born in a health institution within 1 year, the proportions changed to 52% boys and 48% girls, while for those born at home within 1 year, the proportions shifted to 48% boys and 52% girls. Finally, out of a total of 601 children who completed 6 months of full breastfeeding, 53% are boys and 47% are girls.

Overall, there appears to be changes in vaccination status, place of birth, and breastfeeding rates between baseline and end line data, with variations in the distribution between boys and girls across the different categories (*for district, palika, and tole wise details please refer to annex 3*). However, still people are practicing home delivery, most of children are not vaccinated. The reasons are distance health facilities, illiteracy, lack of awareness, lack of required equipment and medicines, proper care, lack of trust, and social norms.

The nutrition status of the population was assessed through two categories: Moderate Acute Malnutrition (MAM) and Severe Acute Malnutrition (SAM), along with Growth Monitoring Card (GMC) records. In the MAM category, comprising 306 individuals, 60% were boys and 40% were girls. Similarly, in the SAM category with 118 individuals, 43% were boys and 57% were girls. The Growth Monitoring Card data encompassed 611 individuals, evenly split between boys and girls. Boys constituted 51% of the total GMC population, while girls made up 49%. Notably, the percentage distribution of boys and girls varied slightly across MAM, SAM, and GMC categories. Overall, while the majority of individuals fell under the MAM category, followed by those under GMC monitoring, a significant portion were also identified as suffering from SAM due to not going for health screening of their children to health facilities, lack of awareness, having balanced diet (*Harek Bar Khana Char*), lack of information, maintaining proper

<i>Nutrition Status</i>	<i>n</i>	<i>%</i>	<i>n</i>	<i>%</i>
<i>MAM</i>	306	100	261	100
<i>Boys</i>	184	60	145	56
<i>Girls</i>	122	40	116	44
<i>SAM</i>	118	100	64	100
<i>Boys</i>	51	43	36	56
<i>Girls</i>	67	57	28	44
<i>Growth Monitoring Card</i>	611	100	435	100
<i>Boys</i>	312	51	215	49
<i>Girls</i>	299	49	220	51

hygiene, and complete breast-feeding practices indicating the need for targeted interventions to address malnutrition in both boys and girls across the population (*for district, palika, and tole wise details please refer to annex 4*).

#### 4. COVID Vaccination Status

<i>COVID Vaccination</i>	<i>n</i>	<i>%</i>
<i>1st Dose</i>	10837	100
<i>Male</i>	5647	52
<i>Female</i>	5190	48
<i>2nd Dose</i>	9150	100
<i>Male</i>	4889	53
<i>Female</i>	4261	47
<i>Buster Dose</i>	6310	100
<i>Male</i>	3351	53
<i>Female</i>	2959	47
<i>Not vaccinated</i>	1245	100
<i>Male</i>	620	50
<i>Female</i>	625	50

The COVID vaccination status indicates that a total of 10,837 individuals received their first dose, with 52% being male and 48% female. For the second dose, out of 9,150 individuals vaccinated, 53% were male and 47% were female. Similarly, 6,310 individuals received a booster dose, with 53% male and 47% female. Among those not vaccinated, totaling 1,245 individuals, an equal split of 50% male and 50% female was observed. These statistics illustrate gender parity in vaccination distribution across the first, second, and booster doses, as well as in the population not yet vaccinated. The data underscores the importance of equitable access to vaccination efforts across gender lines to ensure comprehensive protection against COVID-19.

Among the population not vaccinated against COVID-19, various reasons were reported. The most prevalent reason was pregnancy, accounting for 41% of the total, followed by no proper information at 26%. Other reasons included being out of the village (14%), lack of citizenship (9%), and having a busy schedule (6%). Fear, illiteracy, lack of trust, and adherence to traditional beliefs each constituted a smaller percentage of the reasons, with 1-2% each. These statistics highlight a range of factors contributing to vaccine hesitancy or inaccessibility, emphasizing the need for tailored communication strategies, targeted outreach efforts, and community engagement to address concerns and ensure widespread vaccination coverage.

<i>Reasons not vaccinated</i>	<i>n</i>	<i>%</i>
<i>Busy schedule</i>	73	6
<i>Fear</i>	14	1
<i>Illiteracy</i>	21	2
<i>Lack of trust</i>	15	1
<i>No citizenship</i>	111	9
<i>No proper information</i>	323	26
<i>Out of village</i>	174	14
<i>Pregnancy</i>	507	41
<i>Traditional belief</i>	7	1
<b>Total</b>	<b>1245</b>	<b>100</b>

## 5. WASH Status

The WASH (Water, Sanitation, and Hygiene) status was evaluated through baseline and end line data. The number of households with toilets increased from 1,278 at baseline to 1,398 at end line, indicating progress in sanitation infrastructure. Conversely, the number of households without toilets decreased from 1,183 to 1,082 over the same period, suggesting an improvement in access to sanitation facilities. The number of household tube wells slightly increased from 1,204 to 1,265. Notably, there was a significant rise in the number of community tube wells from 103 to 357, indicating a substantial improvement in community water access. Overall, the data suggests advancements in both household-level sanitation facilities and community water access, reflecting positive changes in WASH status from baseline to end line.

<i>WASH Status</i>	<i>Baseline</i>	<i>End line</i>
<i>Number of households with toilets</i>	1278	1398
<i>Number of households without toilets</i>	1183	1082
<i>No of households' tube wells</i>	1204	1265
<i>Number of community tube wells</i>	103	357

However, the situation surrounding water, sanitation, and hygiene (WASH) presents several pressing challenges. Firstly, the presence of garbage around water sources poses significant threats to water quality and community health, potentially leading to waterborne diseases and environmental degradation. Additionally, the absence of facilities providing access to clean drinking water exacerbates these risks, leaving communities vulnerable to illness and dehydration. Inadequate waste management practices further compound the issue, increasing pollution and health hazards. The lack of filtration or boiling of water signifies a gap in basic hygiene practices, heightening the likelihood of consuming contaminated water. Moreover, the absence of regular water quality testing exacerbates these risks by overlooking potential sources of contamination. Finally, the lack of proper sanitation infrastructure, such as toilets, perpetuates poor hygiene conditions and environmental pollution, contributing to the cycle of health risks. Addressing these challenges necessitates comprehensive interventions aimed at improving WASH infrastructure, promoting hygiene education, and implementing effective waste management systems to safeguard community health and well-being.

## 5. Child Protection Status

The child protection status data reveals several key findings. Firstly, concerning child marriage, 142 cases were reported, with 68% affecting girls and 32% affecting boys. Similarly, child labor affected 53 children, with 85% boys and 15% girls, indicating a higher prevalence among boys. Orphanhood was reported in 47 cases, with a relatively balanced distribution between boys (51%) and girls (49%). Additionally, 70 cases lacked disability identification, with 56% boys and 44% girls. Lastly, in the broader category, encompassing 1,170 cases, there was a nearly equal

<i>Child Protection Status</i>	<i>n</i>	<i>%</i>	<i>n</i>	<i>%</i>
<i>Child Marriage</i>	142	100	43	100
<i>Boys</i>	45	32	10	23
<i>Girls</i>	97	68	33	77
<i>Child Labor</i>	53	100	31	100
<i>Boys</i>	45	85	27	87
<i>Girls</i>	8	15	4	13
<i>Orphan</i>	47	100	19	100
<i>Boys</i>	24	51	11	58
<i>Girls</i>	23	49	12	63
<i>No Disability ID</i>	70	100	33	100
<i>Boys</i>	39	56	21	64
<i>Girls</i>	31	44	12	36
<i>BR</i>	1170	100	659	100
<i>Boys</i>	600	51	337	51
<i>Girls</i>	570	49	322	49

distribution between boys (51%) and girls (49%). These findings underscore the importance of targeted interventions to address gender disparities in child protection, particularly in areas such as child marriage and labor, while ensuring equitable access to support services for all children irrespective of gender or disability status.

<i>Reason of no BR</i>	<i>n</i>	<i>%</i>
<i>Foreign employment</i>	57	5
<i>Father married with other one</i>	7	1
<i>Gender based discrimination</i>	37	3
<i>Lack of awareness</i>	80	7
<i>No citizenship of parents</i>	936	80
<i>No marriage certificate</i>	29	2
<i>Orphan</i>	16	1
<i>Parents death</i>	8	1
<i>Total</i>	1170	100

Among those lacking Birth Registration (BR), various reasons were identified. The majority, constituting 80% of cases, cited the absence of citizenship for parents as the primary barrier. Lack of awareness was another significant factor, accounting for 7% of cases. Gender-based discrimination and foreign employment each contributed 3% and 5%, respectively, to the reasons for not having BR. Additionally, reasons such as the father's remarriage (1%), absence of marriage certificates (2%), orphanhood (1%), and parental death (1%) were also reported, albeit less frequently. These findings highlight systemic issues such as citizenship documentation challenges and the need for increased awareness campaigns to ensure universal access to birth registration, which is essential for securing legal rights and protection for children. Addressing these barriers requires coordinated efforts to address legal and social hurdles, enhance awareness, and streamline registration processes.

## 6. Social Protection Status

	Baseline		Baseline	
	n	%	n	%
<i>Received Child Care Allowance</i>	1397	100	1703	100
<i>Boys</i>	747	53	888	52
<i>Girls</i>	650	47	828	49
<i>No Citizenship Certificate</i>	1387	100	1005	100
<i>Male</i>	510	37	389	39
<i>Female</i>	877	63	616	61
<i>No Marriage Registration (Female)</i>	636		405	

In the baseline data, 1,397 individuals received Child Care Allowance, with 53% being boys and 47% girls. The number increased to 1,703 in the subsequent baseline, with a similar distribution of 52% boys and 49% girls, indicating an overall rise in recipients. Regarding citizenship certificates, 1,387 individuals lacked them in the initial baseline, with 37% being male and 63% female. This number decreased to 1,005 in the subsequent baseline, with 39% male and 61% female. Additionally, 636 females lacked marriage registration at the initial baseline and 405 females at end line. These statistics suggest ongoing efforts to address citizenship and legal documentation disparities among children, particularly girls, alongside providing Child Care Allowance to a growing number of beneficiaries.

<i>Reason no citizenship</i>	n	%
<i>Child marriage</i>	122	9
<i>Death of parents</i>	49	4
<i>Foreign employment</i>	290	21
<i>Married with Indian</i>	267	19
<i>No BR</i>	265	19
<i>No citizenship of parents</i>	193	14
<i>No marriage registration</i>	201	14
<i>Total</i>	1387	100

The reasons for the lack of citizenship among individuals reveal several contributing factors. A significant proportion, constituting 21% of cases, cited foreign employment as the reason, indicating challenges faced by individuals working abroad in obtaining citizenship. Additionally, 19% of cases were attributed to individuals being married to Indian nationals, which might complicate citizenship status. Child marriage accounted for 9% of cases, highlighting the vulnerability of minors in citizenship matters. Lack of Birth Registration (BR) and absence of citizenship for parents each constituted 19% and 14% of cases, respectively, indicating systemic issues in registration processes and parental documentation. Furthermore, the absence of marriage registration (14%) and death of parents (4%) were also reported as contributing factors. These findings underscore the need for comprehensive reforms in citizenship policies, including streamlined processes for registration and documentation, to ensure the rights and legal status of individuals, particularly those vulnerable due to circumstances like foreign employment or child marriage.

The absence of marriage certificates is attributed to various reasons, as outlined in the data. The most prevalent cause, accounting for 27% of cases, is individuals lacking citizenship, which could hinder the legal recognition of marriages. Child marriage is also a significant factor, contributing to 26% of cases, highlighting the challenges faced

<i>Reason no marriage certificate</i>	<i>n</i>	<i>%</i>
<i>Husband abroad for employment</i>	59	9
<i>Child marriage</i>	168	26
<i>Don't have legal required document</i>	16	3
<i>Fear from partition</i>	25	4
<i>Having no citizenship</i>	13	2
<i>Husband abroad for employment</i>	58	9
<i>Lack of awareness</i>	6	1
<i>Lack of proper documents</i>	3	0
<i>Marry with Indian</i>	114	18
<i>No citizenship</i>	174	27
<i>Total</i>	636	100

by minors in obtaining proper documentation. Marrying an Indian national constitutes 18% of cases, suggesting complexities in cross-border marriages and citizenship status. Additionally, husbands being abroad for employment, mentioned twice in the data, collectively contribute 18% to the reasons cited. Fear stemming from partition and lack of legal documents each account for 4% and 3% of cases, respectively, indicating broader societal and administrative barriers. Lack of awareness and proper documentation each constitute a smaller proportion of reasons, at 1% and 0%, respectively. These findings underscore the need for comprehensive reforms in marriage registration processes, coupled with awareness campaigns to ensure legal recognition and protection for marriages, especially for vulnerable populations like those affected by child marriage or citizenship issues.

## Conclusion

The comparative analysis conducted between baseline and end line data revealed several noteworthy findings. Progress was observed in addressing educational challenges, with a reduction in the number of out-of-school individuals, particularly among those under 10 years old. However, challenges persist, as poverty, child labor, lack of parental awareness, and educational infrastructure issues continue to contribute to children being out of school. Efforts to improve vaccination coverage have shown positive results, yet barriers such as home deliveries and low awareness persist, requiring targeted interventions.

Nutrition interventions have seen success in addressing moderate and severe acute malnutrition, although challenges remain in achieving universal access to balanced diets and adequate breastfeeding practices. The WASH status has improved, with increased access to sanitation facilities and community water sources, yet issues such as garbage around water sources and lack of proper waste management persist, necessitating further action.

Child protection efforts have made strides in addressing issues such as child marriage, child labor, and orphanhood, although disparities persist between genders and challenges related to citizenship documentation and marriage registration remain prevalent. The program has also contributed to enhancing social protection measures and resilience among vulnerable populations.

## Recommendation

Based on the findings and conclusions drawn from the "Social and Behaviour Change through Community Engagement and Human Centred Design (HCD)" program in Madhesh Province, Nepal, the following recommendations are proposed:

*Enhanced Community Engagement:* Strengthen community engagement efforts by involving local stakeholders, community leaders, and beneficiaries in the planning, implementation, and evaluation of interventions. Encourage active participation and ownership among community members to ensure sustainability and relevance of programs.

*Tailored Educational Interventions:* Develop targeted educational interventions aimed at addressing the root causes of out-of-school status, such as poverty, child labor, and lack of parental awareness. Provide comprehensive support including access to quality education, financial assistance, and awareness campaigns to promote the importance of education.

*Improved Healthcare Access:* Increase access to healthcare services, particularly for maternal and child health, by addressing barriers such as distance to health facilities, lack of awareness, and cultural beliefs. Implement mobile healthcare clinics, community health education programs, and incentives for healthcare-seeking behavior to ensure equitable access to essential healthcare services.

*Nutrition Promotion Programs:* Expand nutrition promotion programs targeting vulnerable populations to improve dietary diversity, breastfeeding practices, and access to micronutrient-rich foods. Provide nutrition education, supplementary feeding programs, and support for breastfeeding mothers to address malnutrition and improve overall health outcomes.

*WASH Infrastructure Development:* Invest in the development of WASH infrastructure, including sanitation facilities and clean water sources, to address issues such as open defecation, water contamination, and poor waste management. Promote hygiene education and behavior change interventions to improve sanitation practices and reduce the risk of waterborne diseases.

*Child Protection Measures:* Strengthen child protection mechanisms by addressing root causes of child marriage, child labor, and orphanhood. Implement awareness campaigns, legal reforms, and support services for vulnerable children and families to prevent exploitation, abuse, and neglect.

*Social Protection Initiatives:* Expand social protection initiatives to enhance resilience among vulnerable populations, including social safety nets, cash transfer programs, and livelihood support. Target marginalized groups such as women, children, and persons with disabilities to ensure inclusive and equitable access to social protection measures.

*Capacity Building and Training:* Provide capacity building and training programs for local stakeholders, including government officials, community leaders, and volunteers, to enhance their skills and knowledge in implementing effective social and behavior change interventions. Foster partnerships with local organizations and institutions to leverage resources and expertise for sustainable development outcomes.

*Monitoring and Evaluation:* Establish robust monitoring and evaluation systems to track progress, measure impact, and identify areas for improvement. Use data-driven decision-making to adapt interventions based on feedback and lessons learned, ensuring accountability and transparency in program implementation.

*Sustainability and Scale-up:* Foster sustainability and scale-up of successful interventions by integrating them into existing government programs, policies, and systems. Advocate for increased funding, political commitment, and institutional support to sustain efforts and achieve long-term impact on social and developmental outcomes.
